    <div style="margin-bottom: 20px;">
      <h1 class="title">Welcome Vehicle Damage Assessment </h1>
      <p align="justify"><strong>Nowadays, a lot of money is being wasted in
the car insurance business due to leakage claims.
          Claims leakage Underwriting leakage is characterized as the
discrepancy between the actual payment of claims made and the sum
          that should have been paid if all of the industry's leading practices
were applied.
          Visual examination and testing have been used to may these
results. However, they impose delays in the processing of claims.
          The aim of this project is to build a VGG16 model that can detect the area of damage
on a car.
          The rationale for such a model is that it can be used by insurance
companies for faster processing of claims if users can upload pics and
          the model can assess damage( be it dent scratch from and
estimates the cost of damage. This model can also be used by lenders if
          they are underwriting a car loan, especially for a used car.
